

QUATTRO

New propeller

EOS ENGINE and Helix Carbon GmbH/Germany have developed a propeller for the EOS QUATTRO. We recommend using only this propeller.

It guarantees maximum performance of the engine and maximum thrust across the entire RPM range. Additionally, it is optimized to provide best cooling for the engine. To use this propeller, the appropriate propeller adapter (EQ015) is required.

You can obtain this propeller exclusively from EOS Engines – available in 130 and 140 cm – two-blade.

The use of another propeller will void the manufacturer's warranty and further damage to the engine cannot be ruled out.
